

MISSION 9: THE GREAT ESCAPE

This cave's about to crumble like yesterday's egg cream! What's the plan?

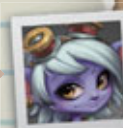

The plan? How about- run!

Fair point, but don't you think it necessary to assess all potentialities?

Nope. Nothing to talk about! RUN!

But what if we-

JUST RUNNNNN!!!!

MISSION SETUP

MISSION OBJECTIVE: All Mechs must stay ahead of the Lava Wall and reach the Safety Zone to escape!

Let's set up boards, cards, and pieces for this Mission!

Safety Zone

Color Compass

Minions

LAVA UP!

The Lava Wall is *even more* dangerous this Mission!

The Lava Wall moves **1** space towards the Safety Zone during Danger Phase the very first Round! Get moving ASAP!

EZ-MODE: The Lava Wall starts moving during **Danger Phase** at the end of the **third Round** instead.

Remember—whenever the Lava Wall flows over a Repair Pad, its speed **permanently increases by 1**, so get out ahead of it as far as you can! (Read instructions on the **Lava Wall** carefully!)

In this Mission, if the Lava Wall pushes a Mech during Danger Phase, it is **instantly obliterated**. **Your entire team loses!**

Mech Starts

Lava Wall

MINION MADNESS

The Minions and Rune spaces have gone full mayhem mode!

MINION MOVEMENT

Roll the Rune Die and move Minions **2 spaces** in the corresponding direction on the Crystal Compass.

MINION SPAWN

Also, spawn Minions on Rune Spaces of the color on the Rune Die.

MINION ATTACK

Minions attack all adjacent Mechs as normal.

IT BURRRRRRRNS...

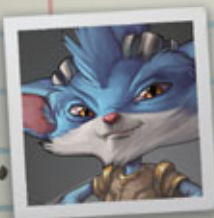

If the Lava Wall pushes any Mech, it instantly **melts into a ball of red hot sorrow** and **your team loses!** Leave no Yordle behind!

CONGRATULATIONS!

If all Mechs are simultaneously standing in the Safety Zone before the Lava Wall arrives, your Mission is complete!

Good job hotfooting outta there! Move on to "Operation Bandle City Beatdown" (find and open its special envelope).

Whew! We're finally outta that cave! ...Though I can't help but feel like there's some unfinished business that's about to come back to bite us.
